

Structural Calculation Report

PROJECT NAME One-Bedroom ADU - Bungalow
Style 'Craftman'

PROJECT ADDRESS Richmond, CA

January 30, 2025

Project: Structural Calculation Report
One-Bedroom ADU - Craftman Style
Richmond, CA

Dear Ms./Mr.,

The following structural design calculation has been prepared for the project above. The scope of work is the design of a one-story, one-bedroom Accessory Dwelling Unit (ADU) – Craftman Style developed for the city of Richmond, California.

By using these standard calculations, the user agrees to release the City of Richmond from any and all claims, liabilities, suits, and demands on account of any injury, damage, or loss to persons or property, including injury or death, or economic losses, arising out of the use of these construction documents. The use of these plans does not eliminate or reduce the user's responsibility to verify any and all information.

These plans are for use only in the City of Richmond, California. It is understood and agreed that this ADU Master Permit Set does not include project observation or review of any contractor's performance or any other construction phase services, and that such services will be provided for by the person or entity who has received a permit to construct the ADU (Homeowner). Any use of these documents, or modifications thereto, by the Homeowner, contractors, builders, or others (User), is performed at their own risk. The User assumes all responsibility for the use and interpretation of these documents and for construction observation and the User waives, to the fullest extent permitted by law, any claims or causes of action of any nature against the architect, its officers, directors, employees, agents, and subconsultants (collectively, Consultant), which may arise out of or that may be in any way connected thereto. In addition, the User agrees, to the fullest extent permitted by law, to defend, indemnify and hold harmless that Consultant against any and all claims, causes of action, lawsuits, damages, liabilities or costs, including reasonable attorneys' fees and defense costs (Claims), arising out of or in any way connected with the performance of such services by other persons or entities and from any and all Claims arising from use, modifications, clarifications, interpretations, adjustments, or changes made to these documents to reflect changed field or other conditions.

The plan set does not include a foundation system. Site specific foundation details are required for ADUs in the city of Richmond. The applicant must hire a general contractor or structural engineer to prepare site specific foundation details and include foundation details with the application for approval by the city of Richmond. Note this includes details and design for the hold down anchorage and bearing posts noted on the S2.1 plan.

Design criteria:

Building Code: CBC 2022

BASIS OF DESIGN (BOD)

Project Name: One-Bedroom ADU - Craftman Style

Date: Jan. 30, 2025

Project Address: Richmond, California

The following structural design criteria has been prepared for the project above. The scope of work is the design of the one-story, one-bedroom accessory dwelling unit (ADU) – Craftman Style for the city of Richmond, California.

Design Criteria:

Building Code: 2022 California Building Code (CBC) with local amendments.

Construction Type: Type V-B [per Arch and CBC Ch. 6]

Occupancy Type: R-2 [per Arch and CBC Ch. 3]

Risk Category: II [CBC Table 1604.5]

Gravity System:

Roof Framing: Pitched roof: 2x8 rafters at 24" o.c. with 15/32" plywood unblocked

Wall Framing: 2x6 D.F. No 2. studs at 16" o.c. typical.

Lateral System:

The lateral system will consist of plywood wood shear wall with a hold down at each end of the wall.

Analysis Method:

Lateral Analysis: Equivalent Force Procedure or Spectral Response is used for seismic force.

Diaphragm is designed as flexible.

Seismic Design Criteria [from USGS Hazard Maps, ASCE 7-16]

This project provides a calculation package and plans for any home owner in the city of Richmond, California to build this particular accessory dwelling unit on their land. To allow for versatility in building locations within the city, the seismic parameters of 6 locations were investigated and the highest values were used for this project design.

Mapped MCE_R Spectral Response (short period), S_s : 2.272 g

Mapped MCE_R Spectral Response (one second), S_1 : 0.877 g

Design Spectral Response (short period), S_{DS} : 1.818 g

Design Spectral Response (one second), S_{D1} : 0.994 g

Seismic Design Category: E

Seismic Importance Factor, I_e : 1 [ASCE 7-16 Table 1.5-2]

Wind Design Criteria:

Basic Wind Speed: 95 MPH

Exposure Category: C

Other Design Criteria:

Rain Intensity: 1.13 in/hr

Live Loads:

Roof: 20 PSF

Special Conditions:

Solar panel weight is accounted in the total loads design.

Wood:

All wood shall conform to the following:

Wood	
Joists and rafters	NO.1
Posts, beams and headers	NO.1
Studs, blockings, light framing and misc.	NO.2
Wall plates	NO.2
Wood sill (P.T.)	NO.2
Pressure treated (P.T.) Joist, beams and posts	NO.2

Engineered Wood (WEYERHAEUSER)	
LVL MICRO-LAMS	2.2E
LSL TIMBER STRAND	1.55E
PSL PARALLEL STRAND LUMBER (BEAMS)	2.2E
PSL PARALLEL STRAND LUMBER (POSTS)	1.8E
I JOIST PER PLAN	U.O.N.

City of Richmond Seismic Map Points

This project provides a calculation package and plans for any home owner in the city of Richmond, CA to build this particular accessory dwelling unit on their land. To allow for versatility in building locations within the city, the seismic parameters of 6 locations were investigated.

Location 1 had the highest seismic design parameters and was used for this project design. See Appendix A for the detailed seismic parameters of all 6 locations.

USGS web services were down for some period of time and as a result this tool wasn't operational, resulting in *timeout* error.
USGS web services are now operational so this tool should work as expected.

Richmond , CA - Location 1

Latitude, Longitude: 37.9942, -122.3581

Date	7/17/2024, 9:17:10 AM
Design Code Reference Document	ASCE7-16
Risk Category	II
Site Class	D - Default (See Section 11.4.3)

Location 1 has the highest seismic design parameters and was used for the lateral design.

Type	Value	Description
S_S	2.272	MCE_R ground motion. (for 0.2 second period)
S_1	0.877	MCE_R ground motion. (for 1.0s period)
S_{MS}	2.726	Site-modified spectral acceleration value
S_{M1}	null -See Section 11.4.8	Site-modified spectral acceleration value
S_{DS}	1.817	Numeric seismic design value at 0.2 second SA
S_{D1}	null -See Section 11.4.8	Numeric seismic design value at 1.0 second SA

Type	Value	Description
SDC	null -See Section 11.4.8	Seismic design category
F_a	1.2	Site amplification factor at 0.2 second
F_v	null -See Section 11.4.8	Site amplification factor at 1.0 second
PGA	0.954	MCE_G peak ground acceleration
F_{PGA}	1.2	Site amplification factor at PGA
PGA_M	1.145	Site modified peak ground acceleration
T_L	8	Long-period transition period in seconds
S_{sRT}	2.574	Probabilistic risk-targeted ground motion. (0.2 second)
S_{sUH}	2.882	Factored uniform-hazard (2% probability of exceedance in 50 years) spectral acceleration
S_{sD}	2.272	Factored deterministic acceleration value. (0.2 second)
S_{1RT}	0.984	Probabilistic risk-targeted ground motion. (1.0 second)
S_{1UH}	1.109	Factored uniform-hazard (2% probability of exceedance in 50 years) spectral acceleration.
S_{1D}	0.877	Factored deterministic acceleration value. (1.0 second)
$PGAd$	0.954	Factored deterministic acceleration value. (Peak Ground Acceleration)

Type	Value	Description
PGA_{UH}	1.123	Uniform-hazard (2% probability of exceedance in 50 years) Peak Ground Acceleration
C_{RS}	0.893	Mapped value of the risk coefficient at short periods
C_{R1}	0.887	Mapped value of the risk coefficient at a period of 1 s
C_V	1.5	Vertical coefficient

DESCRIPTION:	ShearWall Design	DATE:	2025-01-30
	LATERAL CALCULATIONS	BY:	

SHEARWALL AND UPLIFT CALCULATION NOTES

STORY SHEAR DISTRIBUTION AND SHEAR WALL DESIGN:

Forces distributed by tributary area. See Lateral Key Plan for shear line definition.
See previous lateral calculations for force distribution.

TABLE 1. SHEAR WALL SCHEDULE PER NDS 2021: SPECIAL DESIGN PROVISIONS FOR WIND AND SEISMIC, TABLE 4.3A

STRUCTURAL 1	
ALLOWABLE SHEAR	NAIL SPACING
312 plf	6
469 plf	4
611 plf	3
800 plf	2
625 plf	6DBL
938 plf	4DBL
1223 plf	3DBL
1600 plf	2DBL

- Nail spacing specified according to capacities in table above unless noted otherwise.
- FACTOR = % tributary width of shear line
- FORCE = Story shear adjusted for tributary width = Story Shear x FACTOR
- For multi-story shear walls, forces from shear lines above will be distributed by tributary area into shear lines below.
- Wall aspect ratio = h/L , has been considered for each shear wall.
- For walls with h/L between 2-3.5, a reduction Factor = $1.25 - 0.125 \cdot h/w$ will be applied to the shear capacity.
- For walls with $h/L > 3.5$, prefabricated shear wall panels will be specified.
- **HF** Denotes Hardy Frame shearwall panel and anchorage will be specified.
- **STRP** Denotes strapped shear wall. See Strapped Shear Wall Calculations for further details.
- **MF** Denotes Moment Frame. See Moment Frame Calculations for further details.
- Tabulated allowable shear value has been multiplied by 0.92 per NDS 2021: SDPWS table 4.3A footnote 10

PROJECT SPECIFIC NOTES:

- Shear walls designed using 15/32" plywood with 10d nail.
- Posts at hold downs will be specified according to manufacturer's recommendation.

ALLOWABLE TENSION LOADS	STRAP TYPE	POST SIZE
4.69 kip	CMSTC16	4x4
1.705 kip	CS16	4x4

- Tie-downs will be specified according to capacities listed in tables above unless otherwise noted.
- Worst case tie-down anchorage will be specified on plan.
- Designed anchorages may be upsized when specified on plan.
- L' is conservative wall length. Reduction considers tie-downs offset from end of shear wall.
 $L' = L - 1 \text{ ft}$
- Resistant moment from dead loads may not be considered if demand does not exceed minimum hardware capacity.

Appendix A: Seismic Parameters

USGS web services were down for some period of time and as a result this tool wasn't operational, resulting in *timeout* error.
USGS web services are now operational so this tool should work as expected.

Richmond , CA - Location 1

Latitude, Longitude: 37.9942, -122.3581

Date	7/17/2024, 9:17:10 AM
Design Code Reference Document	ASCE7-16
Risk Category	II
Site Class	D - Default (See Section 11.4.3)

Highest seismic design parameters used for design.

Type	Value	Description
S_S	2.272	MCE_R ground motion. (for 0.2 second period)
S_1	0.877	MCE_R ground motion. (for 1.0s period)
S_{MS}	2.726	Site-modified spectral acceleration value
S_{M1}	null -See Section 11.4.8	Site-modified spectral acceleration value
S_{DS}	1.817	Numeric seismic design value at 0.2 second SA
S_{D1}	null -See Section 11.4.8	Numeric seismic design value at 1.0 second SA

Type	Value	Description
SDC	null -See Section 11.4.8	Seismic design category
F_a	1.2	Site amplification factor at 0.2 second
F_v	null -See Section 11.4.8	Site amplification factor at 1.0 second
PGA	0.954	MCE_G peak ground acceleration
F_{PGA}	1.2	Site amplification factor at PGA
PGA_M	1.145	Site modified peak ground acceleration
T_L	8	Long-period transition period in seconds
S_{sRT}	2.574	Probabilistic risk-targeted ground motion. (0.2 second)
S_{sUH}	2.882	Factored uniform-hazard (2% probability of exceedance in 50 years) spectral acceleration
S_{sD}	2.272	Factored deterministic acceleration value. (0.2 second)
S_{1RT}	0.984	Probabilistic risk-targeted ground motion. (1.0 second)
S_{1UH}	1.109	Factored uniform-hazard (2% probability of exceedance in 50 years) spectral acceleration.
S_{1D}	0.877	Factored deterministic acceleration value. (1.0 second)
$PGAd$	0.954	Factored deterministic acceleration value. (Peak Ground Acceleration)

Type	Value	Description
PGA_{UH}	1.123	Uniform-hazard (2% probability of exceedance in 50 years) Peak Ground Acceleration
C_{RS}	0.893	Mapped value of the risk coefficient at short periods
C_{R1}	0.887	Mapped value of the risk coefficient at a period of 1 s
C_V	1.5	Vertical coefficient

USGS web services were down for some period of time and as a result this tool wasn't operational, resulting in *timeout* error.
USGS web services are now operational so this tool should work as expected.
